All types of recharging points	Before you start charging, check the price[5)] in our Apps.

OTHER PRODUCTS OR SERVICES

Recharging card (optional) [6)]	3 € for a new registration and if a duplicate needs to be issued

Comments to the price list:

[1)] Rate for kWh applies to volume of electric energy consumed in the course of a recharging session, which is measured by and transmitted from the recharging point. This information is provided to you in the Apps and on the charging station display, if the station is equipped with it.. Due to state of technological development, the volume may be different from value measured

in your vehicle because of the point's own consumption, losses in the recharging infrastructure (current conversion for DC charging), parameters of vehicle or other technical reasons. Connection time equals time of continuous connector's connection to your vehicle irrespective of time of recharging.

2) "AC" refers to recharging point (such as connector) capable of recharging by alternating current power.

3) "DC" refers to recharging point (such as connector) using direct current. Our DC recharging points may have a different nominal maximum output, for information on the maximum output of the recharging point please see information in our Apps. This is irrespective of the fact that real output of your recharging may be lower due to your car's technical specification, multiple vehicle power distribution management of the charger or for other technology-related reasons.

4) The purpose of the rate for minutes is to make the charging point available to other customers as quickly as possible after the charging process is completed. The rate applies to the period in which the customer's connection time in one session exceeds the free time and applies to each commenced minute. The fee does not apply to AC points (connectors) at GreenWay's own stations from 8:00 p.m. to 8:00 a.m. the next day.

5) The price may vary among the recharging points and is presented after log in to the Apps with recharging points pricing information, which are currently the Chargers map and mobile Apps. The price may also be displayed on the recharging station and/or on our website and made available via a hyperlink on the recharging station. Rates published shall be applied under the same conditions as stated in this pricelist. Exceptions will be specifically mentioned in the Apps, at the recharging stations, on the website or notified to the client. The prices in the pricelist apply to the recharging of passenger and commercial vehicles.

6) Recharging card allow client's authorization at the charging point and initiation of the recharging session. Only one RFID can be activated for each driver's account.

ARTICLE 2 – PRICE CALCULATION AND PAYMENTS

2.1 The amount due for our recharging services shall be calculated as sum of (i) price component based on rate for kWh specified in this pricelist, and (ii) price component based on rate for minutes specified in this pricelist. In cases of charging at partners recharging points or at GreenWay's roaming partners network, the amount due shall be calculated according to the price (amount and how it is calculated), which you may find after log in to the Apps. The amount due shall be calculated for each recharging session separately.

2.2 We will request an authorization of your card in the amount of: (i) up to 1 € in the case of a preliminary authorization for a customer registered under the Standard pricing plan, and (iii) amounts of up to 100 € in the case of using the one-time charging service.

2.3 In order to secure payment, we reserve the right to: (i) block funds on the payment card (preauthorization) in an amount of up to 100 € or a higher amount specified by you in the customer account settings, or (ii) collect the full fee for the charging session after its completion. If payment is not completed by way of preauthorization or after the charging session, it will be collected at the time the VAT invoice is issued. Charges for other services and products are incurred at the time of their delivery or dispatch.

2.4 Payments for our services are collected automatically from the payment card registered by you in our Apps, or via payment through a payment terminal available for one-time charging, at the moment the relevant fee becomes due, or—if such payment cannot be made at that time—at a later date when the funds available on the card allow us to collect the required amount. If an attempt to block or collect funds from the payment card is unsuccessful, access to our services will be blocked each time. Services may be unblocked once all outstanding amounts have been settled.

2.5 Under the standard offer for customers registered for multiple recharging sessions, an invoice for charging services is issued on the day following the completion of the charging session. We reserve the right to change the billing period to monthly in dedicated offers.

2.6 An invoice for other services or products is issued within a maximum of 7 days.

2.7 Fees for roaming charging services may be calculated and invoiced separately after receiving data from our roaming partner. In such cases, the amount is collected on the invoice issue date.

ARTICLE 3 – CHANGE OR TERMINATION

3.1 We reserve right to make any changes to terms of this pricelist, including change or termination of the price programs.

3.4 If we change this price list, we will inform you at least 14 days in advance. If you do not agree with the changed terms of the price list, you can terminate the framework contract with immediate effect.

ARTICLE 4 – DATE OF EFFECT

4.1 This price list was published on October 1, 2026 and is valid from October 15, 2026.
